Reasons for Indicating Allowable Subject matter

1. Claims 1-5 are allowed.

3. The following is the examiner's statement of reason of allowance: The prior art of record to:

Samra describes a system and method for optimizing the processing of a sequence of images represented as a directed acyclic graph. The method comprises receiving a selection of a view node at which point an output image is to be viewed. The cost to process each predecessor branch of nodes of a plurality of branches of nodes in the directed acyclic graph. The output image is rendered by processing the predecessor branches in order from most costly to least costly.

Georgiev is directed to a system in which an iteration engine executes within an operating environment provided by a computer. The iteration engine is given a plurality of selected elements from the array and iteratively applies the kernel to the array to update the selected elements with new displacement values until a termination condition is achieved. Upon termination, a warping engine transforms the digital image according to the new displacement values, thereby warping the digital image.

Trinh describes apparatus for processing image data comprising frame storage means for storing image data, memory means for storing instructions and a data structure representing processing

to be performed on image data in said frame storage means, processing means for performing said image processing, said instructions defining a sequence of operations to be performed in order to process frames of said image data in a sequence of operations defined by said data structure, wherein said data structure comprises an output node, at least one input node for receiving frames from said frame storage means, and a plurality of connected process nodes that request frames from other nodes by specifying a frame requirement

Independent claim 1 when considered as a whole, are allowable over the art of record. Specifically, prior art of record fail to disclose or suggest the means for enabling a user to connect an output of the transformation operator to an input of the effect operator for receiving the transformation data, and displaying the editing window including both the one or more transformation hierarchies and the one or more effects trees to the user.

Dependent claims 2-5 further add limitations to the allowable subject matter of the corresponding independent claim, thus are also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
